Re: Product Code/ Label Description for Tested Product Codes

To Whom It May Concern,

The label description identified below shows the placement of the 'T' identifier within Tyson Fresh Meats product codes that identifies products that are subject to testing as described by the Beef HACCP Guarantee. Note that the 'T' qualifier is the last character within the product code as highlighted below. The 'T' designation is one of two means to identify product that is tested and found negative for *E. coli* O157:H7; other products without the 'T' code may be accompanied by a Certificate of Analysis in which analysis for *E. coli* O157:H7 was performed.
